

Updates to NSAID warnings* could matter to your heart

In 2016, the U.S. Food and Drug Administration (FDA) required an update to the Drug Facts labeling of all adult, children's, and infants' **non-aspirin OTC nonsteroidal anti-inflammatory drugs** (NSAIDs), for example Motrin®, Advil®, and Aleve® products. These changes provide consumers with additional information relating to the risk of heart attack and stroke associated with NSAIDs.

*Information indicated by  and red text below highlights the updates to the cardiovascular related warnings. **Note that this chart does not represent the complete list of warnings** found on the Drug Facts Label, including existing cardiovascular warnings that were not impacted by the FDA requirement.

Remember to always refer to the Drug Facts Label for complete warnings and important information and ask your healthcare provider if you have any questions.

Updates to NSAID Warnings

Allergy Alert

{Refer to full Drug Facts Label on product for complete list of warnings}

Stomach bleeding warning

{Refer to full Drug Facts Label on product for complete list of warnings}

Heart attack and stroke warning

NSAIDs, except aspirin, increase the risk of heart attack, heart failure, and stroke. These can be fatal. The risk is higher if you use more than directed or for longer than directed.

Ask a doctor before use if

- stomach bleeding warning applies to you
- you have problems or serious side effects from taking pain relievers or fever reducers
- you have a history of stomach problems, such as heartburn you have high blood pressure, heart disease, liver cirrhosis, kidney disease, asthma, or **had a stroke**
- you are taking a diuretic

When using this product

- take with food or milk if stomach upset occurs
- **the risk of heart attack or stroke may increase if you use more than directed or for longer than directed**
{this statement is replaced by the 'Heart attack and stroke warning' above}

Stop use and ask a doctor if

- you experience any of the following signs of stomach bleeding:
 - feel faint
 - vomit blood
 - have bloody or black stools
 - have stomach pain that does not get better
- **you have symptoms of heart problems or stroke:**
 - chest pain
 - trouble breathing
 - weakness in one part or side of body
 - slurred speech
 - leg swelling
- pain gets worse or lasts more than 10 days
- fever gets worse or lasts more than 3 days
- redness or swelling is present in the painful area
- any new symptoms appear
